

Daniel Kling (idxny) - Contribution Statement

Primarily responsible for:

- reproducible project setup, data download and cleaning pipeline fixes, initial exploratory data analysis, proposal/report updates, final analysis integration, and Quarto website rendering support
- Created and tested the reproducible project environment, including renv-related files and the initial Quarto website rendering workflow.
- Improved the data pipeline by fixing the raw data download script and cleaning process so the analysis data could be regenerated more consistently.
- Created and refined exploratory data analysis outputs for the proposal, including variable selection, missing-value checks, summary statistics, and first visualisations.
- Added and updated analysis/report files, README and proposal content, and helped re-render the final website after project feedback and revisions.

Collaborative tasks:

- research question development, topic selection, interpretation of EDA and analysis results, checking the rendered proposal/report, final website review, and discussion of project limitations and LLM usage.
